

BIO4AE3 - 26 Nov

• more examples

Candida auris.

B. dendrobatidis

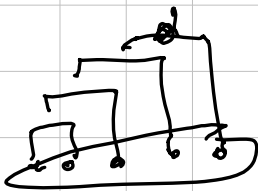

dilution effect

? surveillance, prediction

→ first isolated 2009.

• ↳ earliest in collections in 1996

• phylog analysis - 'molecular clock'
≈ 37 years to MRCA.

multidrug resistant
heat tolerant
upto 42°

newly virulent? newly resistant? heat tolerant?

HYPOTHESIS: driven by global warming?

environmental habitats → selects for heat tolerance

nosocomial = transmitted in health-care settings
(vs 'community-acquired')

C. difficile.

iatrogenic

• DILUTION EFFECT.

competence, { host
vector

? is increased/decreased biodiversity 'good' or 'bad' for parasites?

Lyme disease in northeastern US forests

• small mammals, ticks

Peromyscus ~ white footed mouse.

Opossums ~ 'diluters' ~ much rarer.

communities with lower diversity were dominated by Peromyscus.

• why is the diversity changing?

- comparing extant communities.
- effects of anthropogenic change

↳ DEPENDS on how the community shifts

→ does it shift to more competent hosts?
